

" Easy Vision® " Concept

- **You will be able to hang a transparent part on every standard shutter or the ones already placed (think of renovation) !**

*Keep the good elements (motor, runners, bottom slat, lock, etc...)
and, according to your needs or budget, hook on 1 or 2 meters of TRANSPARENCY !!*

- **And then, year after year, double the transparent surface of your shutter
AS YOU LIKE IT !!!**

*There is also a possibility, just by changing the side rails, to increase the "anti-break-in"
power of your shutter with the 3 following patented Terrific Force systems :*

● **Terrific Force Generator + keypad :**

It sends a repellent electric flow along the aluminium tubes (these are insulated from the pedestrians on the pavement by the transparent copolymer elements). Legal, because non-lethal. So, it is able to ward off any attempt to cut or damage the shutter, while immediately releasing a phone alert or the following Terrific Force devices :

● **Terrific Ejector :**

If an intruder manages to force your entrance by ram raid, it ejects up to a 1000 m³ of incapacitating gas ! (clean, while containing pepper and chilli pepper, biodegradable within the hour and leaving no residue)

● **Terrific Gun :**

It «fires» at the intruder a more than real cannon shot (with flame and smoke like in a real barrel), much more impressive than a siren not very effective these days.

- **Prevents at last louts to enter and to be on the loose in your home !!!**
