Terrific Force 4 Registered Trademark, Model, and Patent
N°0505229, N°0401917, N°0204755, N°051413, N°035475

The P.C.P. (Personalized Composite Polymer) links making up the protection shield Terrific Force 4, come from a state-of-the-art technology answering to the highest demands as regards resistance.

MECHANICAL SOLIDITY

Terrific Force 4 is more resistant than the traditional steel shutter. It absorbs violent shocks and it beats of any attempt of housebreaking.
- The trapezoidal-shaped links overlap each other. This guarantees a solid structure superior to classic assemblies.

ELECTRONIC SECURITY

- This "Active Shield" can be equipped with an Electronic Generator sending a **repellent electric flow along the hinges and a powerful projection of incapacitating Gas**. This puts a hold to any attempt of housebreaking or ram raid.
- **Terrific Force 4** is compliant with the European Security Norms and is subsidized by ANVAR.

TRANSPARENCY

Put a hold to dark and dirty shop windows! Install 100% transparency on 87% of the shutter surface!
- **Terrific Force 4** enables all shop windows to retain its visual attraction.
- The evenings and the shop closing periods become productive at last. These new see-through shutters light up the heart of the streets.

ATTACK PROOF

- In comparison with the micro-punched shutters or any other shutter, **Terrific Force 4** is the only defence to be water-, wind-, dust-, heat- and cold-resistant as well as UV stabilized [it protects the products from discolouring].
